

A good source of clean fresh water is essential for all of us. Central District Health Department has a water testing laboratory and tests water from both groundwater well supplies and for commercial premises for Coliform bacteria and Nitrates. Click here for further information. <http://www.cdhd.ne.gov/services/water-testing-water-quality>

□ **What you can do.** In times of emergency it is a good idea to have a supply of water sufficient to meet your demand for a few days (bottled water is inexpensive and has a long shelf life), get your well water tested for contamination regularly and after any flooding incident
